

I want to update my Recruit Studio client

If you use the auto-update client version of Recruit Studio, your software will prompt you to install any new updates as they are released, so this document will not apply to you.

If you use the static client version of Recruit Studio then you will need to update it periodically so you can enjoy the latest features. You should only be using this static version in certain situations such as:

- *Your PC is 64bit*
- *Your network only allows the Administrator to install software onto the PC*

If you think that you would like to install the auto-update version instead, please [read these instructions](#).

1. To update your static client you must first close Recruit Studio.
2. Go to www.recruitstudio.co.uk and from the Download menu choose 'Download Recruit Studio'.
3. Click on **step 2 only** and allow the software to download and install, clicking 'Run' when prompted.
4. When the installation has finished, reopen Recruit Studio.

We recommend that you do this once every fortnight to make the most of the latest features in Recruit Studio.
